AL MIRATH

East Africa Industrial & Logistics Opportunities 2023

Opportunity signals, logistics infrastructure and location intelligence through 2023

Corporate Expansion & Real Estate Opportunity Intelligence

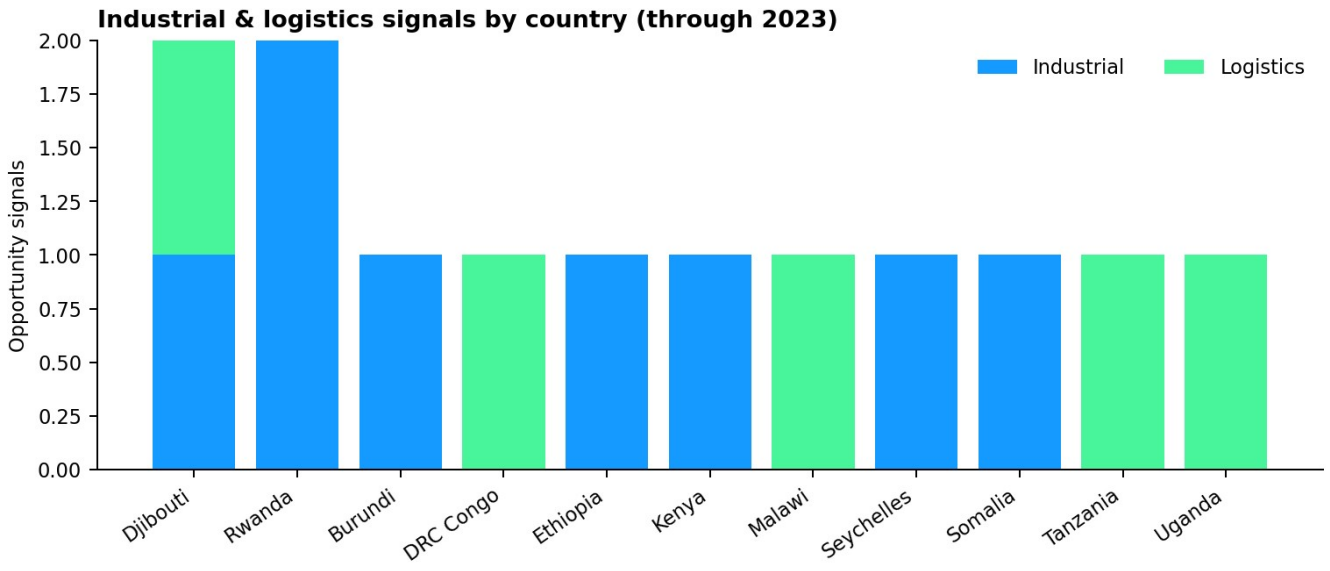

Prepared from the Al Mirath analytical dataset | Reporting cut-off: 2023

This report is a screening and location-intelligence document. Opportunity signals are not confirmed property listings. Modelled property-ticket values, land requirements, demand indices and scenario rent/yield inputs are illustrative analytical fields, not verified transaction evidence.

Executive Summary

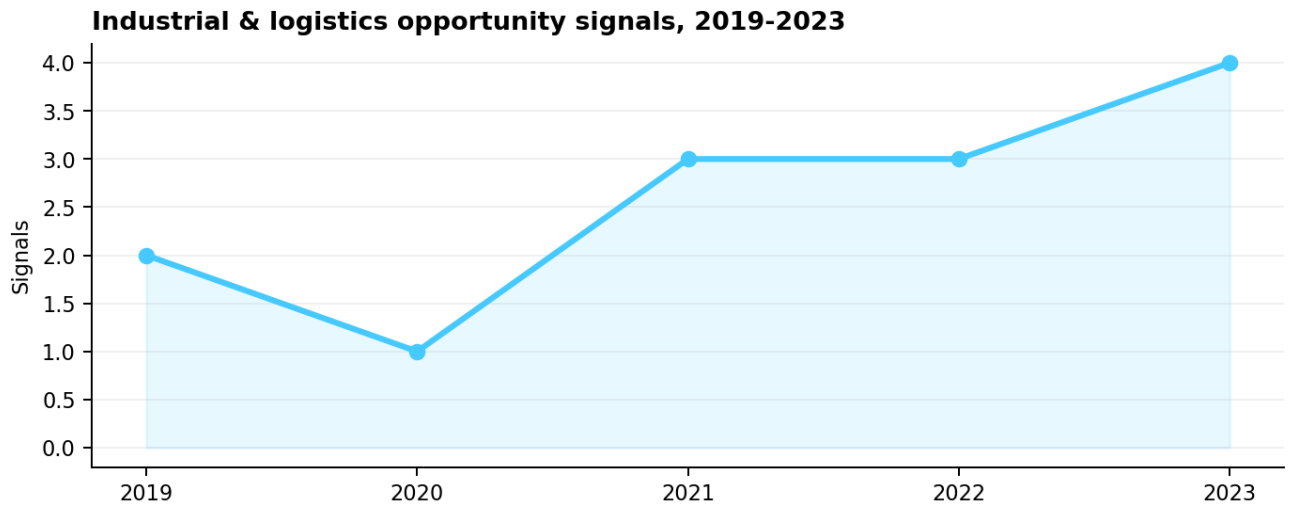

13	9	$65.5M	11
Industrial & logistics signals	**High-priority signals**	**Modelled property tickets**	**Markets represented**
In-scope, Signal Year <= 2023	Score >= 70	Not verified transaction value	Across East Africa

- The 2023-cut register contains 13 in-scope industrial and logistics opportunity signals: 8 industrial and 5 logistics.
- 9 of the 13 signals meet the workbook high-priority threshold of 70 points, while the average score is 73.5/100.
- The associated modelled property-ticket value totals $65.5M and indicative gross land requirement totals 24.5 ha. These are scenario fields, not verified valuations or available land.
- The strongest themes are manufacturing space, distribution centres, data centres, ports, special economic zones and regional trade corridors.
- Infrastructure evidence dated through 2023 includes ports, SEZs, industrial parks, data centres and rail/logistics assets that can strengthen location attractiveness, but each project still requires status and accessibility verification.

1. Opportunity Structure

8	5	73.5	24.5 ha
Industrial signals	**Logistics signals**	**Average score**	**Indicative land need**
62% of set	38% of set	Screening score / 100	Scenario requirement

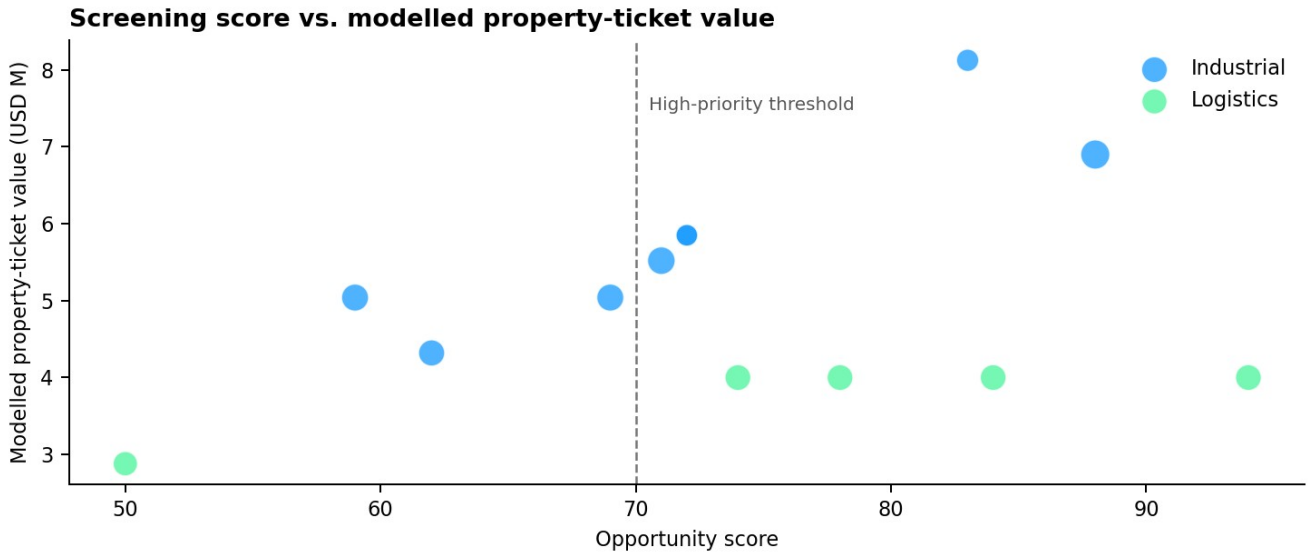

- Signal activity is uneven by year because the register captures dated company expansion and infrastructure-linked events rather than a continuous property transaction series.
- 2023 contributes four industrial/logistics signals in the filtered set, including Tanzania logistics, Rwanda industrial/SEZ-linked demand, and data-centre-related requirements in Ethiopia and Rwanda.
- Industrial demand is broader than traditional manufacturing: the facility mapping includes data centres and certain construction-led industrial requirements where the source signal implies a physical site need.

Interpretation: signal counts should be used for screening and prioritisation, not as a proxy for total market take-up or transaction volume.

2. Highest-Scoring Opportunity Signals

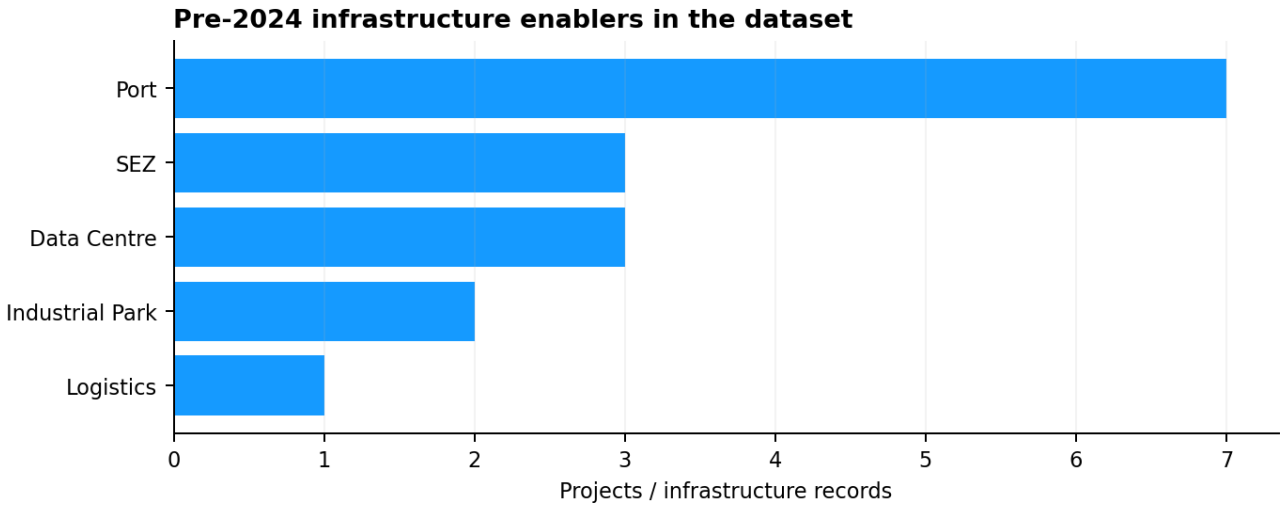

Score	Year	Country	Asset	Lead company	Facility	Modelled value
94	2023	Tanzania	Logistics	DP World	Distribution Center	$4.00M
88	2023	Rwanda	Industrial	ARISE Integrated Industrial Platforms (ARISE IIP)	Construction Project	$6.90M
84	2022	DRC Congo	Logistics	Africa Global Logistics (MSC Group)	Distribution Center	$4.00M
83	2020	Kenya	Industrial	Huawei Technologies	Data Centre	$8.12M
78	2021	Djibouti	Logistics	China Merchants Port Holdings Company Limited	Distribution Center	$4.00M
74	2019	Uganda	Logistics	Uganda Airlines (Uganda National Airlines Company)	Distribution Center	$4.00M
72	2023	Ethiopia	Industrial	Raxio Group	Data Centre	$5.85M
72	2023	Rwanda	Industrial	Africa Data Centres (Cassava Technologies)	Data Centre	$5.85M
71	2021	Burundi	Industrial	SOSUMO (Société Sucrière du Moso)	Manufacturing Plant	$5.52M
69	2022	Seychelles	Industrial	Thai Union Group (Indian Ocean Tuna Ltd)	Manufacturing Plant	$5.04M

The opportunity score is an existing source screening score, not an investment rating. Modelled property-ticket value is a scenario budget and should not be interpreted as corporate capex or a market valuation.

3. Infrastructure & Logistics Enablers

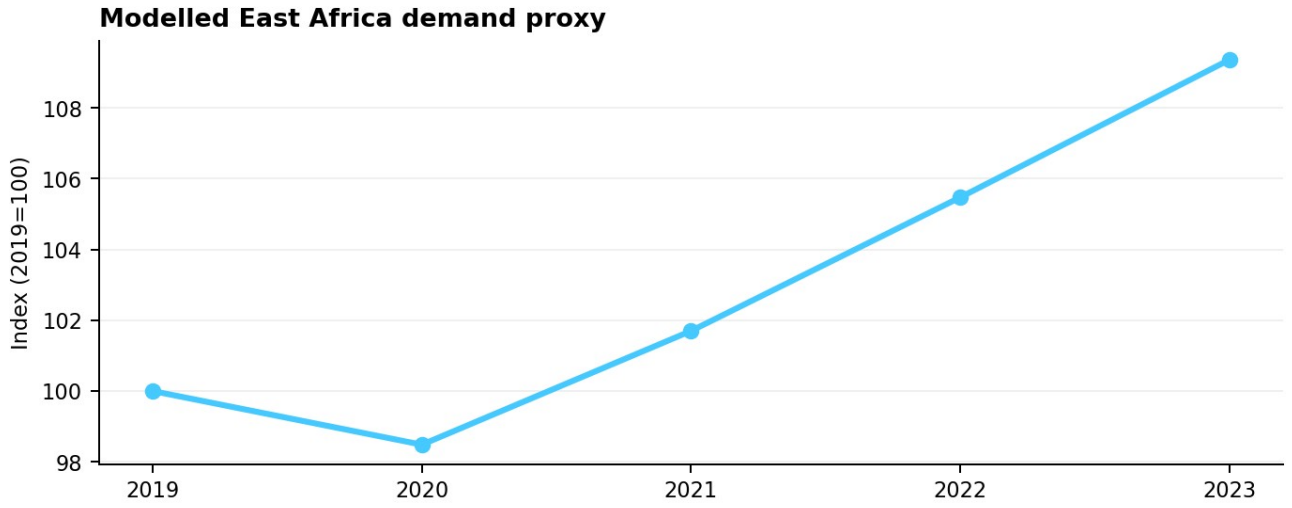

16	7	3	3
Infrastructure records	**Ports**	**SEZs**	**Data centres**
Source date <= 2023	Maritime & inland	Industrial/trade zones	Digital infrastructure

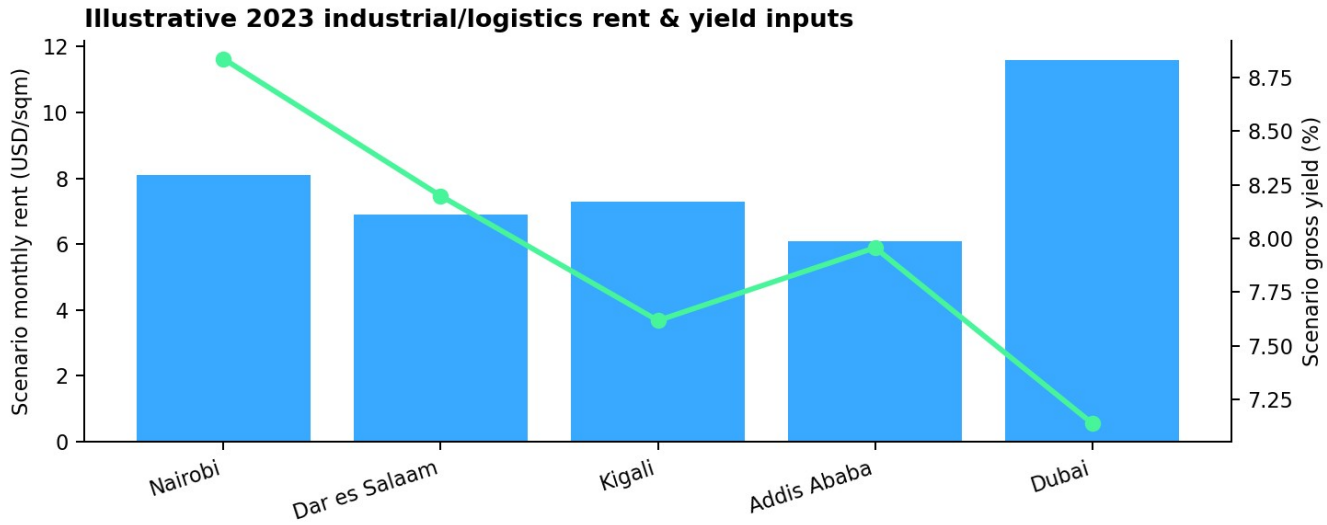

- Ports and inland container facilities are the largest pre-2024 infrastructure category in the dataset, supporting import/export, warehousing and distribution location decisions.
- SEZ and industrial-park examples include Djibouti International Free Trade Zone, Kigali Special Economic Zone, Berbera Economic Zone and Hawassa Industrial Park.
- The Addis Ababa-Djibouti Railway and Kigali Logistics Platform illustrate the importance of inland connectivity between production centres and regional gateways.
- Data-centre records in Ethiopia, Malawi and Uganda add a digital-infrastructure layer to the industrial opportunity set.

Year	Country	Type	Project / asset
2022	Comoros	Port	Port of Moroni Deep-Water Port Redevelopment
2022	Malawi	Data Centre	Malawi National Data Centre
2023	Somalia	SEZ	Berbera Economic Zone (BEZ)
2023	Rwanda	SEZ	Kigali Special Economic Zone (KSEZ)
2023	Somalia	Port	Bosaso Port Expansion
2023	Burundi	Port	Port of Bujumbura Modernization (Lake Tanganyika Transport Corridor Development Project, Phase I)
2023	Tanzania	Port	Port of Dar es Salaam (DP World concession)
2023	Ethiopia	Data Centre	Raxio Ethiopia Data Centre (ET1)

4. Demand Context & Scenario Economics

- The workbook demand proxy rises from 100.0 in 2019 to 109.4 in 2023, after a 2020 decline. It is driven by an equal-weight regional GDP-growth input and an illustrative elasticity assumption.
- This index is useful for directional screening but is not observed industrial absorption, vacancy or take-up.
- The 2023 rent/yield panel below is also an illustrative scenario framework. No observed rent or yield values are populated in the workbook.

Scenario inputs: Nairobi, Dar es Salaam, Kigali, Addis Ababa and Dubai. Gross yield is calculated from scenario monthly rent x 12 / scenario capital value and excludes vacancy, fees, taxes and operating costs.

5. Market Priorities Through 2023

Rwanda

2 signal(s), average score 80.0, 2 high-priority. Facility themes: Construction Project, Data Centre.

Tanzania

1 signal(s), average score 94.0, 1 high-priority. Facility themes: Distribution Center.

DRC Congo

1 signal(s), average score 84.0, 1 high-priority. Facility themes: Distribution Center.

Kenya

1 signal(s), average score 83.0, 1 high-priority. Facility themes: Data Centre.

Uganda

1 signal(s), average score 74.0, 1 high-priority. Facility themes: Distribution Center.

Ethiopia

1 signal(s), average score 72.0, 1 high-priority. Facility themes: Data Centre.

Burundi

1 signal(s), average score 71.0, 1 high-priority. Facility themes: Manufacturing Plant.

- Tanzania stands out in the filtered register through the 2023 DP World-linked logistics signal, while Rwanda combines SEZ/industrial development and data-centre demand.
- Ethiopia combines industrial connectivity, a dry-port/rail ecosystem and a 2023 data-centre signal, making infrastructure linkage particularly relevant to site selection.
- Kenya remains strategically important for regional distribution and data infrastructure, although the filtered pre-2024 register contains only one qualifying industrial signal in this specific opportunity subset.
- Djibouti has both industrial and logistics signals and a strong port/SEZ context, but property-specific evidence still needs to be verified before investment conclusions are drawn.

6. Due-Diligence Priorities

1	2	3	4
Verify supply	**Verify pricing**	**Verify access**	**Verify tenure**
Vacancy, pipeline, warehouse stock	Rent, service charges, land, cap rates	Ports, roads, rail, power, customs	Land availability & legal control

- Land availability is not verified in the opportunity register. Indicative land requirement is a modelled gross site need and must not be relabelled as available land.
- No verified property transaction values are populated for the filtered signals. Scenario property-ticket budgets are useful for relative screening only.
- Observed industrial/logistics rents and yields are absent from the workbook; the city-level values used in the dashboard are illustrative examples.
- Infrastructure announcements and operational claims should be rechecked before external publication, particularly where later phases or concessions may have changed project status.
- For shortlist progression, pair each high-priority signal with a city/site search for serviced industrial land, warehouse stock, road/rail access, power reliability, customs/SEZ status and current asking rents.

Recommended use: shortlist -> verify property evidence -> verify infrastructure status -> collect observed market comparables -> then perform valuation or investment underwriting.

7. Methodology & Data Notes

- Reporting cut-off: 2023. Opportunity analysis includes records with In Dashboard Scope = 1, Signal Year <= 2023, and Asset Class equal to Industrial or Logistics.
- High priority means Opportunity Score >= 70, consistent with the workbook methodology.
- Estimated Value (USD M) is a modelled property-ticket budget. It is not a verified transaction value and is not the same as disclosed corporate investment.
- Indicative Land Requirement (ha) is a modelled site requirement. Available Land Area remains blank unless separately verified.
- Infrastructure examples are restricted to source dates through 2023.
- Demand Index is a modelled macro proxy with 2019 = 100 and an illustrative 0.70 GDP-growth elasticity.
- Scenario rent and yield values are illustrative and not observed market comparables.

Dataset component	Use in this report
RE_Opportunities	Industrial/logistics screening signals, scores, scenario values and facility types.
Infrastructure	Ports, SEZs, industrial parks, logistics, rail and data-centre context through 2023.
RE_Demand_Trend	East Africa modelled demand proxy, 2019-2023.
RE_Market_Rent_Yield	Illustrative 2023 industrial/logistics rent and gross-yield scenario inputs.
Macro_Source_2019_2023	Macroeconomic context supporting the demand framework.
